

ABSTRACT

5

10            "A screwing head for screwing a cap onto a  
bottle or similar container comprises a thruster member  
positioned within the rotating organ for gripping the  
cap which is thrust against the cap during a step  
previous to the start of the cap screwing step, in  
15 order to drive the cap onto the neck of the bottle, as  
well as during the cap screwing step, and during a step  
following the completion of the screwing of the cap.  
(Figure 3)"
